

LB7

LIGHT COVER LIFTER "BEAK" TYPE

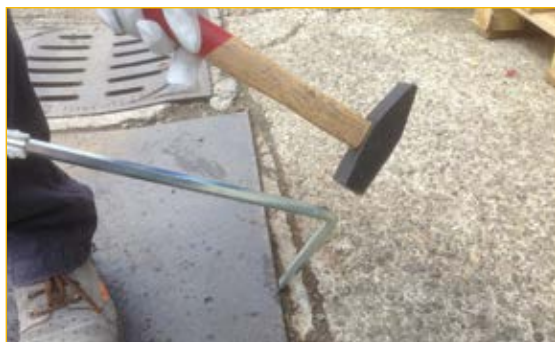

Ideal for opening and repositioning manhole covers and grids of medium / small weight. The double flat beak with its hardened steel tip can be inserted in the contact slots, resistant and strong tool.

The beaks can also be used in the operations of scraping the frame of the lid.

The "D" shaped handle provides a fulcrum point to facilitate the lifting operation.

Due to its characteristics and function, it is the ideal alternative to using the classic pickaxe like in the past.

Built in tempered 38NCD4 steel with galvanized anti rust finish which makes the LB7 a resistant and robust tool.

The plastic handles guarantee excellent grip even with safety gloves.
